

Yasir Khan Portfolio Website Documentation

Simple guide for the React portfolio project

Created for: Yasir Khan

Project type: React + Vite personal portfolio website

1. What This Project Is

This project is a personal portfolio website for Yasir Khan. It shows his work, skills, contact information, and developer profile in a clean web page.

The website is built with React. Vite is used to run the site while working and to create the final build for hosting.

2. Main Features

- Hero section with the main title and social links.
- About section with a short intro, highlights, and animated numbers.
- Skills section with filters and progress bars.
- Portfolio section with project cards.
- Contact section with email, LinkedIn, GitHub, and a form.
- Dark and bright mode toggle.
- Responsive design for mobile and desktop screens.

3. How To Run The Project

Open a terminal inside the project folder.

```
npm install
```

Use this command if packages are missing or if node_modules is not available.

```
npm run dev
```

This starts the local website server.

Open this link in the browser:

```
http://127.0.0.1:5173/
```

```
npm run build
```

This checks the project and creates the final production files in the dist folder.

4. Important Files

- index.html: The browser page shell. It has the title, favicon, font links, and React root.

- styles.css: All design styles, responsive layout, and dark mode colors.
- src/main.jsx: Starts the React app.
- src/App.jsx: Joins all page sections together and handles theme/navigation state.
- public/logo.png: The logo image used in the navbar and browser tab.

5. Component Files

- Navbar.jsx: Logo, menu links, mobile menu, and dark/bright mode button.
- Hero.jsx: Main first section with title, short text, buttons, and social icons.
- About.jsx: About text, image, highlights, and animated counters.
- Skills.jsx: Skill filters, skill cards, and progress bars.
- Portfolio.jsx: Project cards and contact button.
- Contact.jsx: Contact details and contact form validation.
- Footer.jsx: Copyright text at the bottom.

6. Data And Helper Files

- src/data/siteData.js: Main data for nav links, skills, projects, and about items.
- src/utls/scroll.js: Smooth scroll helper.
- src/utls/contactValidation.js: Contact form values and validation rules.

7. How To Edit Common Things

- Change the logo by replacing public/logo.png.
- Change the browser title in index.html.
- Change the hero text in src/components/Hero.jsx.
- Change about text in src/components/About.jsx.
- Change skills and projects in src/data/siteData.js.
- Change contact email and social links in Hero.jsx and Contact.jsx.
- Change colors, spacing, and dark mode in styles.css.

8. Contact Information Used

- Email: yasirkhan9850233@gmail.com
- LinkedIn: <https://www.linkedin.com/in/yasir-khan-it>
- GitHub: <https://github.com/yasir50233>

9. Important Note About The Form

The contact form checks if fields are filled and if the email looks correct. Right now it does not send real email. To send real messages, connect it to a backend,

EmailJS, Formspree, Netlify Forms, or another form service.

10. Deployment

Run this command before uploading the site:

```
npm run build
```

After this, upload the dist folder to your hosting service.

11. Simple Troubleshooting

- If the page is blank, run npm install and then npm run dev again.
- If the logo does not show, check that public/logo.png exists.
- If changes do not show, refresh the browser.
- If a build fails, read the terminal error and check the file name it mentions.
